

## CONSTRUCTION CRANE SIMULATION FORKLIFT

GlobalSim™

### True to Life

The GlobalSim Forklift model is a real-time, single or multi-channel simulator that provides operator training for lifting and transporting loads. When you require the look, feel, and maneuverability of the real equipment, the GlobalSim Forklift delivers. Integrated with original manufacture's controls and a replica cab.

### Full Training Options

Take advantage of true training flexibility by building and editing training scenarios to meet your particular needs. Change attachments, select tasks and even control environmental factors such as weather, wind, and time of day.

### Get the Full Picture

Students gain real, transferable skills with custom training scenarios enhanced by the control and monitoring ability of an advanced instructor station. Instructors can assess critical skills and understand areas of weakness in students, allowing for timely corrections and rapid improvement.

### Flexible Hardware Options

GlobalSim's advanced simulation systems offer the most realistic virtual training available. With several platforms to choose from and the option to have interchangeable control consoles, GlobalSim can provide a training solution for specific configurations of any equipment.

## Product Features

- » Compatible with all of GlobalSim's hardware platforms designed to match any budget
- » 4k high resolution visual system
- » Optional virtual reality (VR) headset providing full 360 views and depth perception
- » 7800 pounds lifting capacity
- » 4 inches forklift height
- » Engine rpm varies from 725 rpm to 2200 rpm
- » Multiple loads: pallets, steel parts, bags, pipes, and steel coils
- » Student database and scenario editor
- » Built in curriculum based on certification courses.
- » Integrated Load Moment Indicator (LMI) that displays several angles
- » After Action Review application for training session feedback
- » Instructor station application for monitoring and controlling training sessions
- » High fidelity sound system
